

**The development of products using profiled tubular steel sections means that the familiar static advantages of natural hollow structures, such as reeds and the bones of birds can be transferred into structural or artistic requirements.**

Cleverly designed section shapes can reduce the need for a multi-fabricated product, alleviating distortion, material and labour cost. The excellent static properties of steel allows the use of very slender profiled sections.

Specially designed sections are used in a wide variety of markets from furniture to automotive.

The potential for profile manufacture offers our customers a very individual range of purpose made sections differentiating your product in the market.

Special Formed Tube can be supplied as welded cold rolled precision tube or welded and cold drawn precision tube. The product is available in various grades to suit your individual requirements.

- **We have or can obtain the profile to suit your requirements.**
- **Differentiate your product in the market.**
- **Reduce manufacturing or processing times.**
- **Large stocks of many basic profiles.**
- **Delivering throughout the UK from one of our regional branches.**
